

**"I predict one day, Amazon will
fail."**

Jeff Bezos just shocked Amazon investors to the core
with this dire statement.

**"I predict one day, Amazon will
fail."**

Jeff Bezos just shocked Amazon investors to the core with this dire statement.

In a recent interview, Bezos explained that he believes "Amazon will be disrupted one day" and eventually "will go bankrupt."

What might be even more alarming is that Bezos has dumped roughly **\$1 billion** worth of Amazon stock...

But Bezos isn't just cashing out, he's reinvesting his money into a fast-emerging technology that he believes will "improve every business."

What most people don't know... is that there is a tiny component powering this tech revolution... a component that Amazon doesn't produce in-house.

That's because another company (a fraction the size of Amazon)...is producing a powerful component that is leaps and bounds ahead of the competition.

He's not alone in seeing it this way...

- A Shark Tank billionaire says it will create the world's first *trillionaire*
- Elon Musk is contributing to a \$1 billion investment in this technology
- Even super-investor Warren Buffett says that it's "*enormously disruptive*" and will have a "hugely beneficial social effect"

So what is it about this technology that has some of the most successful investors in the world pouring fortunes into it?

They see it as a massive investing opportunity - much bigger than Amazon, Tesla, and Berkshire Hathaway combined.

You see, even though these billionaires have been openly talking about this technology to anyone who will listen, most ordinary Americans still don't know how to get in on the action and invest in what could be the investment opportunity of a lifetime!

Namely, some market researchers believe this technology could potentially be worth up to \$15.7 trillion!

With numbers like that, and with so many of the richest investors and entrepreneurs in the world racing to get in on this new technology... you can see why paying attention could really pay off.

But we believe the biggest returns are *yet to come*.

Which is why we don't feel like we're very far out on a limb with this "bold" prediction:

Five years from now, you'll probably wish you'd bought these stocks.

And the good news is that you can find out all about these companies and this incredible technology *today*.

What we've told you so far is just the tip of the iceberg...

So, to help regular Americans like you understand how to take advantage of this emerging trend, The Motley Fool's team of investment analysts has laid out the full story on this incredible tech trend in a report.

We call it the *AI Disruption Playbook: An Investor's Guide to this \$15.7 Trillion Market*.

Inside you'll discover our **top three stocks** for this rapidly developing trend that could potentially become bigger than the creation of the Internet itself.

But please note: You may not be eligible to access this valuable research.

Because ***AI Disruption Playbook: An Investor's Guide to this \$15.7 Trillion Market*** is privately published and only available to members of *Stock Advisor*.

Which is why we want to do something radical to make sure you can become eligible almost instantly...

We've been authorized to offer a **steep discount for new members** on *Stock Advisor* so that as many people as possible can get their hands on this report.

We're calling it the "**AI Disruption Event**"... and we hope it will energize your investing life, allowing you to become a valued *Stock Advisor* member — and receive your *AI Disruption Event report* with the

names of the three companies we're talking about - **for less than \$1 a week when you purchase a 2 year term¹.**
